

Welcome to The Rack

A Smart Touch to Traditional Flavours

A polished honey-oak, two-tier kitchen organiser with seven containers. It keeps your everyday ingredients in their place, shows estimated stock, and helps your household notice salt and sugar use over time.

Ingredient stock
Check estimated quantities, low-stock alerts and shopping needs.

Household awareness
Review shared salt and sugar use trends and manage voluntary goals.

Meet your rack

TOP TIER *left to right*

1. **Chili**
2. **Pepper**
3. **Turmeric**
4. **Salt**

BOTTOM TIER *left to right*

5. **Sugar**
6. **Milk Powder**
7. **Coffee**

Keep each container in its assigned position so stock estimates stay useful.

Setup & First Use

Four quick steps to get your rack ready

Set up your rack

1

Place the rack

Use a flat, stable, dry kitchen surface.

Keep away from water and direct heat.

2

Fill & label

Fill and label the seven containers.

Place each one in its matching position.

3

Check the app

Open the GamMiris app or prototype dashboard.

Confirm the rack and ingredient list appear.

Container positions

TOP TIER *4 containers*	1 **Chili**	2 **Pepper**	3 **Turmeric**	4 **Salt**
BOTTOM TIER *3 containers*	5 **Sugar**	6 **Milk Powder**	7 **Coffee**	

Set up the app

1 **Log in or sign up** — Create an account or log in to get started.

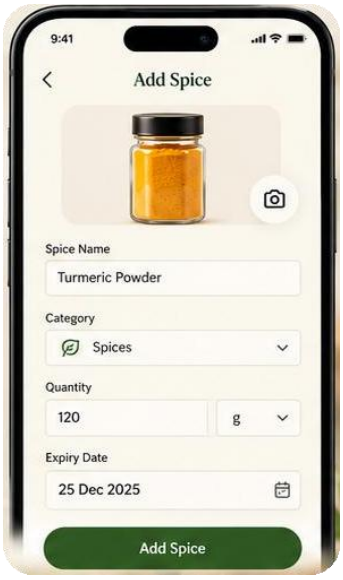

2 **Add spices** — Add each spice to the rack and enter its details: spice name, category, quantity, and expiry date when available.

3 **Check spices** — View all your spices, quantities and low-stock alerts in the app

4 **Check salt & sugar** — Review estimated household salt and sugar use and set voluntary goals

1 · Log in / Sign up

2 · Add spices

Ingredient Stock

Know what is left before you run out

GamMiris estimates the amount remaining in each container using weight-based tracking. Use the app to review stock, choose low-stock thresholds and plan refills.

1. **Track**
   Weight-based tracking estimates what is left in each container.
2. **Set threshold**
   Choose when the app should remind you a refill may be needed.
3. **Review alert**
   Check the estimate before adding the item to your list.
4. **Shopping list**
   Add items likely to run low. Remove ones you no longer need.
5. **Refill & update**
   Refill the container, then use the refill or update action if your build has one.

In the app

My Spices: quantities and low-stock alerts

Read the stock bars

Each row in My Spices shows an estimated quantity and a stock bar. Bar colours show how much is left:

- **Enough stock**
- **Running low**
- **Refill needed**

Shopping list

- Add an ingredient when its estimate shows it may run low.
- Review the list before shopping; remove items you no longer need.
- After shopping, refill the container and update its status in the app when supported.

Keep estimates useful

- Keep the rack on a level surface.
- Return each container to its assigned position.

Estimates may vary. Displayed amounts are estimates. They can change if the rack or a container is moved, and may not match exact quantities.

Awareness & Safety

Notice patterns together and look after your rack

GamMiris The Rack
Smart Kitchen Organizer

Salt & sugar: shared household estimates

Health Overview: sample screen showing shared household estimates

1 · Review the trend

Open the Health Overview and switch between Day, Week and Month to notice changes in household use over time.

2 · Set voluntary goals

Choose salt or sugar goals that suit your household. They are optional.

3 · Optional lock

If the optional lock is enabled, use the authorised override when access is needed.

Awareness only. These features show shared household-use estimates of how much salt and sugar is removed from the household containers. They do not measure any one person's intake, give medical advice, or diagnose, prevent or treat any condition.

Care & safety

Clean gently

Wipe the rack with a soft, dry or lightly damp cloth.

Keep electrical parts dry

Keep electrical parts dry.

Away from water & heat

Use on a stable, dry surface away from direct heat.

Level and in place

Keep the rack level and each container in its assigned position.

Odd estimate?

Check the rack is level and the container is in its position.

No recent update?

Check the connection and follow your build's pairing steps. [Add confirmed model-specific instruction]

Product limits: *Inventory and usage figures are estimates based on household containers and prototype sensors, and may not represent exact quantities. App features shown in a project demo may be simulated. Follow the instructions for your specific prototype build.*
